ISS Releases MomentumSP v2.4

On March 1, 2003 Integrated Software Solutions, Inc. (ISS) released MomentumSP, Version 2.4, the industry's only complete Web-based, global securities processing system that offers functionality for all debt and equity securities.

Although MomentumSP has been in development since early 2002, Version 2.4 represents the first release that utilizes a browser-based user interface to access data and process transactions using state-of-the-art object, relational, and XML technologies.
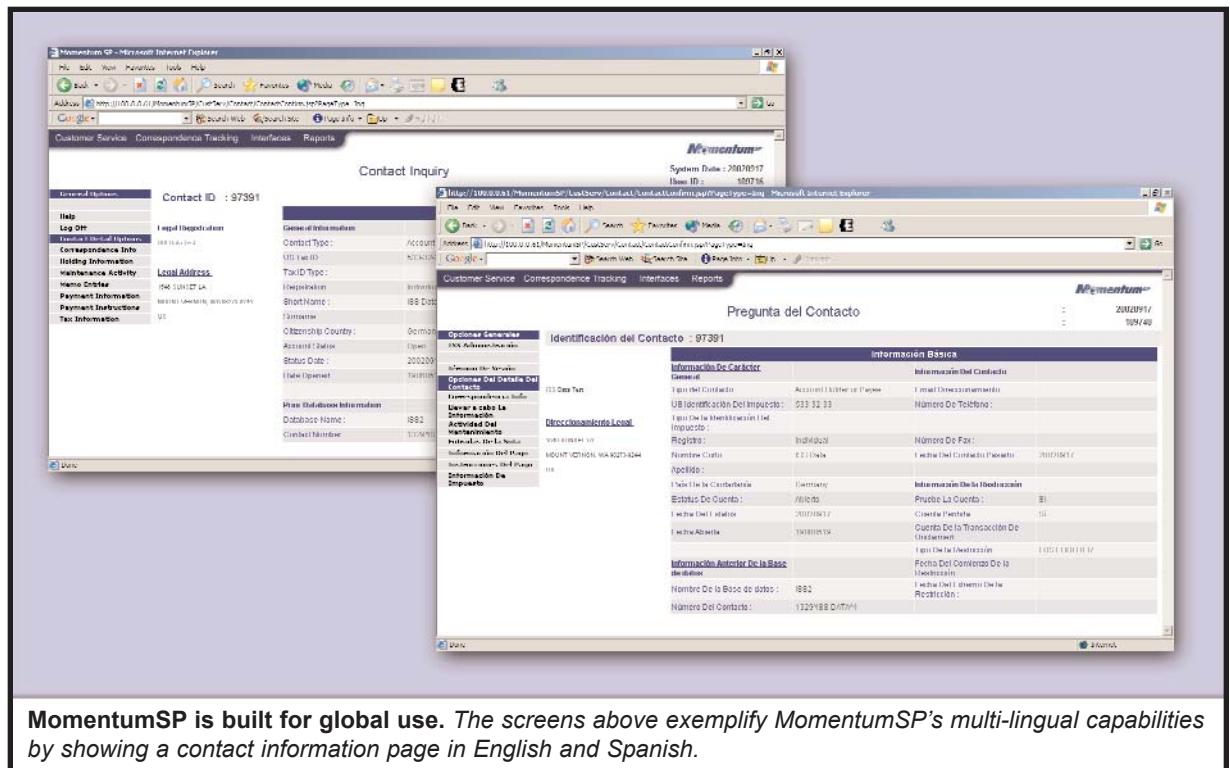

According to Eliot Ginsberg, Founder, Chairman, and Chief Technical Officer of ISS, "We reached a major milestone not only for our client's project, but also for our long term goal of enhancing our suite of product offerings to include MomentumSP."

"The long term benefits of reaching our ultimate goal of building a browser-based global securities processing system that will be the first of its kind in the securities industry are tremendous."

As a single, global solution, MomentumSP will support domestic and international corporate trust operations in a straight through processing environment. MomentumSP will streamline securities processing in a multi-currency, multi-lingual, multi-calendar, and multi-time zone mode

on a single platform that operates on the Solaris, NT, and AIX systems.

MomentumSP v2.4 has been deployed in the corporate trust division of one of the world's largest securities processing institutions for testing purposes. Response has been positive. Ginsberg states, "They have been

very impressed with our service delivery and the features of MomentumSP. To date, we are achieving a greater than 90% positive result ratio in the Q/A testing of the 2.4 release."

MomentumSP is built for global use. *The screens above exemplify MomentumSP's multi-lingual capabilities by showing a contact information page in English and Spanish.*

Alaska Physicians & Surgeons, Inc. (APS) choose Scriptacom

Alaska Physicians & Surgeons, Inc. (APS) selected Scriptacom as their preferred provider of transcription-related services.

APS, a group of 165 Alaska-based, private physicians, will use Scriptacom's Web-based medical transcription and file transfer services.

APS' decision to use Scriptacom proves that Scriptacom's medical transcription solutions are optimal for large groups. Scriptacom's HIPAA-compliant, secure Web-based application provides file upload, tracking, and file download capabilities, which allow individual practices to streamline their transcription processes. Additionally, large medical organizations that represent multiple physicians are attracted to Scriptacom because of Scriptacom's competitive pricing offerings.

APS board member Harbir Makin, MD endorsed Scriptacom and referred the services to APS' executive director for review. According to Makin, "Transcription through Scriptacom has been the best thing I could do for my practice. Service is exceptional, prompt and personal. Quality of work beats any transcription work I have had done in 15 years. Not being "computer savvy", Scriptacom's employees have personally helped me feel at home when using their service. I recommend Scriptacom's transcription without any reservations."

APS Executive Director Mike Haugen states, "Scriptacom came highly recommended by a member of our board because of its excellent service and competitive pricing model for our very large group."

Tom Bonanno, Director of Scriptacom, sees the signing of APS as further proof of Scriptacom's reliability. "I am pleased to have APS as a Scriptacom client. APS' commitment to quality, as well as their geographic proximity, show that they believe in Scriptacom's Web-based model, "states Bonanno.

14th Annual CU Users Association Conference May 7-9, 2003

The 14th Annual Corporate Universe™ Users Association Conference will be held on May 7-9, 2003 at the ACE Conference Center in Lafayette Hills, Pennsylvania.

The conference is a two-day event featuring presentations on topics including: the U.S. Patriot Act, Straight Through Processing within Corporate Trust, Dematerialization, SEC Review, and multiple training sessions. In addition, Integrated Software Solutions, Inc. will be unveiling its new product, MomentumSP, to industry experts.

MomentumSP is the first securities processing system that provides functionality to process both debt and equity securities on a global scale. As a single, global solution, MomentumSP will support domestic and international corporate trust operations in a straight through processing environment.

As President of the Users Association, Jane Labouliere stated, "For those of us experiencing below normal temperatures and above normal snow fall, we are looking forward to the fast arrival of spring, which, like the CU Users Conference, will be here before we know it!"

"It has been a great experience to lead the executive committee this year and we have worked diligently to plan a great agenda for this year's conference. It is beneficial for all users to network and share ideas, processes, and thoughts about the system we all rely on to keep our businesses running smoothly."

"We look forward to the Users Group Conference every year," stated Integrated Software Solution's President, Mike Glynn. "It is wonderful to see our clients. This year will be special because we have listened to our clients and had them play a more active role in the preparation of the meeting, in hopes of another successful conference."

Not only is the Users Group Conference enjoyable and educational, it meets ICB criteria for Continuing Education credits. Participants will receive eleven hours of credit.

Central Bank and Trust Extends its Contract with Integrated Software Solutions, Inc.

Lexington, Kentucky-based Central Bank and Trust signed a multi-year renewal of its Corporate Universe™ contract with Integrated Software Solutions, Inc.

Corporate Universe, the first securities processing system that provides functionality to process both debt and equity securities on a single system, satisfies Central Bank and Trust's mission to operate a community bank holding company that delivers high quality financial relationships. Additionally, Corporate Universe enables Central Bank and Trust to focus on outstanding customer service while adhering to their philosophy of quality people making a quality difference.

Douglas Fritz, Vice President and Trust Officer for Central Bank and Trust states, "Central Bank has used other vendors in the past to complete our bond and stock transactions, but we found that [Corporate Universe] is the most efficient and user friendly system. We have been able to use the system [as] an invaluable piece of our trust service platform. The old saying still applies when you look at ISS -- 'You get what you pay for.'"

Corporate Universe is used by banks to provide securities record-keeping services. Its open systems environment and object-oriented database allows for Internet access, IVR integration, and rapid development.
